

RFID Event Management Services.

Module 1 of 10

Registration. Let us assume that each visitor or member of staff must be checked and accounted for on arrival at the event for the first time or for the days (or even weeks) of the duration of the event. Today most events have adopted a print at home barcode on a piece of paper or on a smart phone.

A quick scan of the barcode will bring an individual's details up on the registration database. To issue and assign an RFID Wristband or ID Card a random card or wristband is selected from stock and offered up to a scanning sled.

A look up of the individual's name and details can be used also if they do not have the barcode handy.

This then assigns the individual to that card or wristband for the duration of the event. Their permissions can be edited at any time on the management database so that when next scanned these changes are automatically updated, very useful for access control at the perimeter or anywhere throughout the site. (back stage. VIP. AAA etc) The short video demonstrates the system which is relevant for Delegates, Visitors, Fans, Staff, Crew, Management etc.

Our Products and Services are competitively priced backed by a friendly, competent and experienced team ready to guide and support our Client's requirements.
