

RFID Event Management Services.

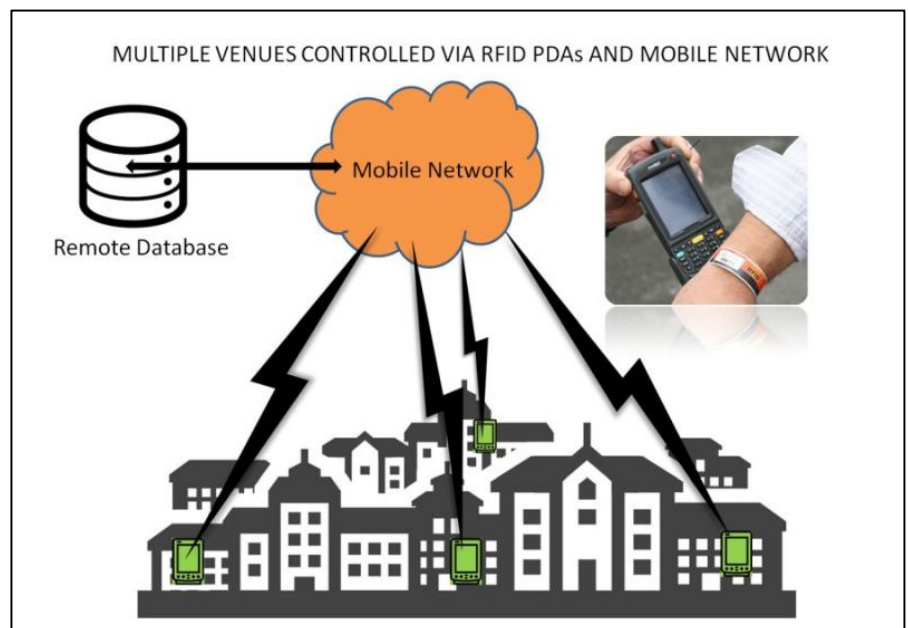

Module 10 of 10

Multiple simultaneous venues to Central Control Access Control. Often events can include multiple venues over several different venues.

Access Control and Capacity Management can be challenging in this instance but with RFID Wristbands or Cards and RFID Scanners with Mobile Network connectivity a solution can be implemented quickly and with no requirement for LAN connectivity.

PDA's scan the RFID Wristband to check permissions written to the chip. This information is checked over the mobile network to a remote database with responses taking a few seconds.

In this way tickets can be checked, capacity rates monitored and permissions changed realtime using the PDA scanners to write updates to the RFID Wristbands or ID Cards. Please make contact for more information, case studies etc.

Our Products and Services are competitively priced backed by a friendly, competent and experienced team ready to guide and support our Client's requirements.
