## RFID Event Management Services.

### Module 6 of 10

Asset Management (Hand held Radios, PDAs etc) In itself Asset Management can become a massive topic but we are specifically looking at assets used on build and break sites so let us take hand held radios. This is a quick and easy module to implement once the site is networked and our services are already in operation providing, for example, Access Control.

Whenever a radio is handed out to anyone the Manager in charge of the radios scans the recipients RFID Card or Wristband and with the same device scans the barcode on the radio.

That individual is then recorded as having received the radio at a specific time and date. On the return the radio barcode is scanned to provide a record. Any comments such as damage or failure of the radio can also be recorded and assigned to the radio's records for future attention.

At the end of the day the system will show the Manager any exceptions, IE, anyone who has not returned their radio.

These records can be invaluable for post event auditing and subsequent follow-up for any operational considerations.

Our Products and Services are competitively priced backed by a friendly, competent and experienced team ready to guide and support our Client's requirements.
